Patient Name:

[REDACTED]

DOB(age):

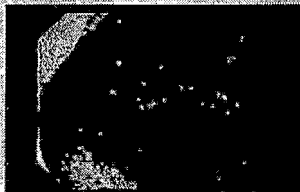

1/20/1970

Provider:

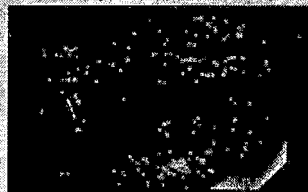

Franjo Vladic, MD

Dear Robert Juhasz:

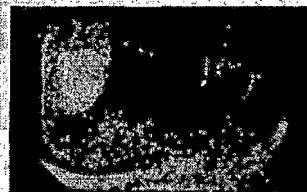

The patient was seen at our endoscopy center and below is a summary of the procedure:

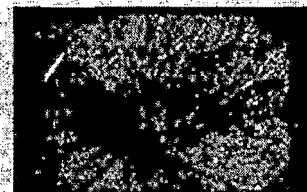

normal ileo-cecal valve

normal appendiceal orifice

Lipoma in the transverse colon

Grade 1 internal hemorrhoids

Findings:**Protruding lesions**

A medium lipoma was seen in the transverse colon.

Medium non-bleeding grade 1 internal hemorrhoids were noted.

A single sessile non-bleeding polyp of benign appearance ranging in size from 6 mm to 8 mm was found in the hepatic flexure. A piece-meal polypectomy was performed using a cold snare. The polyp was completely removed. The polyp was completely retrieved.

A single sessile non-bleeding polyp of benign appearance ranging in size from 3 mm to 4 mm was found in the descending colon. A cold forceps biopsy was performed for histology in the descending colon. Complete excision was performed.

Impressions:

Lipoma in the transverse colon.

Grade 1 internal hemorrhoids.

Polyp (6 mm to 8 mm) in the hepatic flexure. (Polypectomy).

Polyp (3 mm to 4 mm) in the descending colon. (Biopsy).

Recommendations:**General**

- Vitals Signs per protocol.
- Rectal Tube as needed.
- Discontinue IV when patient stable.
- Discharge when criteria met.
- Disposition to home.
